To Whom It May Concern:

I have had the privilege of knowing Ty Davis for the past six years, during which we competed as teammates on the cross country and track teams at Weber State University. As both an athlete and a student, Ty distinguished himself through his exceptional work ethic, resilience, and drive to continually improve. Even in the most demanding environments, he consistently demonstrated discipline, focus, and a willingness to go the extra mile—qualities that translate directly into his professional life.

Beyond athletics, Ty has always been exceptionally tech-savvy, intellectually curious, and deeply passionate about engineering. While majoring in Electrical Engineering, he routinely impressed peers and professors with his ability to break down complex technical problems and create elegant, efficient solutions. Even outside of coursework, Ty dedicated countless hours to building software, experimenting with game development, and exploring new technologies purely out of passion and a desire to learn.

Ty's transition into software engineering is a natural extension of his strengths. He approaches technical challenges with the same determination he brought to training and competition—methodically, creatively, and with an unwavering commitment to excellence. He thrives in collaborative environments, communicates clearly, and consistently elevates the people around him.

I am confident that Ty will be an invaluable asset to any engineering team. His combination of technical skill, curiosity, and character is rare, and I give him my highest recommendation without hesitation.

If you have any questions or would like further insight into Ty's abilities, please feel free to contact me.

Sincerely,
